

## Installation Instructions:

**VIBRA PADS™**

VIBRA PADS™ isolation pads can be installed with factory applied peel & stick pressure sensitive adhesive, readily available contact adhesives or mechanical fasteners such as screws or nails.

VIBRA PADS™ products are engineered to isolate hard surfaces from each other to reduce structure borne (vibration) noise transmission.

Typical mounting applications would include HVAC units, under pump mounting plates, between sheet metal enclosures and under audio speakers.

To maximize the noise reducing performance of VIBRA PADS™ isolation pads, it important to isolate any contact between the noise / vibration source and any other surface.

VIBRA PADS™
